

SCC TITAN WHISPER

SATELLITE-BASED TRACKING WITH INTEGRAL PANIC BUTTON AND THREE WAY TEXT MESSAGING.

Tracking

The SCC TITAN Whisper operates on the Iridium satellite network, which offers complete global coverage. Robust and versatile, the device can be hand-carried or deployed as a vehicle tracker using the optional vehicle kit. We offer AES-256 bit encryption as standard across Iridium, ensuring the integrity of data. The reporting rate can be changed as required, from 30 second intervals upwards. Waypoint marking and 'checkin' messages are also supported, all controlled through the device's colour LCD screen.

Battery Life

Impressive battery life of best-in-class level allows for prolonged operation away from power sources, even at high reporting rate.

Panic Alarm

When the panic button is pushed, audible SCC TACTICAL and visual alerts appear on the SCC Platform. Notification of the alarm is also automatically forwarded by SMS and e-mail to nominated recipients and SCC Tactical first responders.

Text Messaging

The Whisper provides 3-way chat messaging between the devices and the SCC Platform, device to asset group and device to device. Free text, predefined canned messages and group messaging are supported.

M2M

A machine to machine (M2M) connection is available allowing for remote configuration and advanced monitoring of computer systems via the SCC Platform or SCC Tactical.

SCC TITAN WHISPER

SCC Platform

Combine the Whisper with tracking, communications and emergency alert software - the SCC Platform - and allow your operators to monitor and manage personnel & assets on a common operating picture. As the SCC Platform is web-based, users can log in securely from anywhere with an Internet connection, whether that be a mobile tablet PC or a sophisticated operations centre. We have also introduced a field-based application, SCC Tactical. This uses the Whisper as a secure communication bearer to provide 'blue force tracking' and command & control from anywhere in the world.

Technical Specification

Certification	FCC, IC & CE
Communication	Iridium 1616 to 1626.5 MHz GPS Frequency: 1575.42 MHz
Dimensions	135mm x 61mm x 35mm
Weight	300 g (0.65 pound)
Operating temperature	-20 C to +55 C
Dust & Water Ingress	IP67
Interfaces	Standard mini USB RS232 Bluetooth
Security	AES 256 Encryption
Power	Direct 5v or 12v
Battery life	When fully charged, the Lithium-ion battery should power the Whisper for up to 12 hours with continuous 1 minute position reports with no power saving setting and up to 7 days using sleep mode at 15 minute intervals.
Nato stock Number	5895-99-739-9606

WHISPER IS A PIONEERING TRACKING SOLUTION. THE LATEST HANDHELD GPS SYSTEM OF ITS KIND, IT PROVIDES TRACKING, EMERGENCY ALERT AND TEXT MESSAGING CAPABILITY FOR PERSONNEL AND VEHICLES ANYWHERE IN THE WORLD.
